Beginner's Guide Using SedoFX

Learn how beginners can automatically replicate expert traders' moves with the SedoFX copy trading system — step by step.

Copy trading has revolutionized how individuals participate in financial markets. Instead of spending years learning market analysis or spending hours monitoring charts, you can **automatically follow and replicate the trades of experienced traders**. Platforms like SedoFX make this process seamless, empowering traders of all skill levels to potentially grow their portfolios by tapping into the expertise of successful traders. This guide explains exactly how copy trading works, the steps involved, and key points to consider before getting started.

1. What Is Copy Trading?

Copy trading is a type of social trading where you link your trading account to that of another trader — often a professional or highly experienced one — and **automatically mirror their trades in real time**. Whenever the trader you follow opens, adjusts, or closes a position, the same actions are executed in your account proportionally, based on the amount you've allocated.

Unlike simply observing other traders or receiving signals, copy trading **executes trades automatically** in your account, saving time and reducing the effort normally required for manual decision-making.

2. How Copy Trading Works — Step by Step

Here's how the copy trading process typically unfolds on a platform like SedoFX:

Step 1: Choose a Copy Trading Platform

Start by signing up with SedoFX and completing any required account verification. Make sure your account supports the copy trading feature, and that you understand the terms, fees, and risk disclosures involved.

[sedo] Trades | Portfolio | **Copy Trading** | Explore Social Trading > Money Managers

TestimonyManager Risk Level: 2 | Win Rate: 85%	Return: +152.67%	Details	Copy
SCALPING TRADE Risk Level: 5 | Win Rate: 78%	Return: +98.40%	Details	Copy

Step 2: Explore and Research Traders

Browse available signal providers — experienced traders whose performance is displayed through historical data such as returns, drawdown levels, win rate, and consistency.

Step 3: Allocate Funds to Copy

Decide how much of your account balance you want to allocate for copying a selected trader. SedoFX will then use that amount to **automatically mirror** the trader's positions — scaled proportionally to your funds. For example, if the trader allocates 10% of their capital to a trade, your account will similarly allocate 10% of your chosen copy amount.

Copy to TestimonyManagerAccount: Standard (USD)

Subscription Options

Amount (USD):	$500.00
Single Position Max Loss:	$50.00

Step 4: Automatic Trade Execution

Once you're linked, every trade the chosen trader makes — opening, adjusting, or closing — is mirrored in your account in real time. You don't have to do anything manually; the platform handles this all for you.

Step 5: Monitor and Adjust

You can access this feature under the **"Copied Managers"** section on the SedoFX platform. Even though copy trading runs automatically, regular monitoring is essential. In this section, you can track performance, review open and closed trades, and evaluate overall returns. At any time, you have full control to stop copying a trader, modify your investment allocation, or diversify your strategy by following multiple managers to better manage risk and optimize results.

Copied Managers (1 Active)Total Profit: +$45.50

3. Key Benefits of Copy Trading

- ✅ **Automation:** No need to manually place trades — SedoFX does it for you.
- ✅ **Learning Opportunity:** Beginners can observe market strategies and risk management techniques from professionals.
- ✅ **Flexible Control:** You retain control over your funds, allocations, and risk settings.

4. Risks and What to Watch Out For

While copy trading can make markets more accessible, it is **not risk-free**:

- 🔹 **Performance Varies:** Your earnings depend on the selected trader's skill and market conditions.
- 🔹 **Losses Are Possible:** If the trader you follow makes poor decisions, your account mirrors those losses.
- 🔹 **Market Volatility:** All financial markets carry risk, and rapid changes can affect copy trading results.

5. Final Thoughts

Copy trading on SedoFX gives both beginners and busy traders a way to participate in financial markets without needing to master technical analysis or spend hours studying price charts. By choosing experienced traders wisely and managing your risk, you can benefit from a balanced blend of automation and professional insight.
